

## ColorGATE Production Server 5-Fujifilm “Ultimate” Version

ColorGATE is software that will drive most all Fujifilm Wide Format products. This software is very unique to this industry bringing color management and features/functions to a higher standard with an amazing user friendly interface and unique iterative color management approach.

### Color Management Capabilities

- Wizard based and assistant guides for profiling creation directly integrated into ColorGATE software architecture
- Express Profiler allows for a faster profiling approach between multiple modes or speeds on a specific media

### Consistency between Multiple Devices

- Media Device Synchronization (MDS)-Iterative process that calibrates multiple wide format printers into one color space

### User Friendly Interface

- Easy and intuitive menu navigation and automatic assistants

### Quality Assurance Module (QAM)

- Quality assurance/quality control technology-measures standards and generates a “pass or fail” report with additional reporting tools as well as archiving and labeling

### 16 Bit Color Rendering

- Converting the color engine from 8 to 16-bit color rendering makes it possible to produce smoother gradients and noticeably optimize detail reproduction.

### White Ink Support

- Seamlessly optimized white ink support for all applications including; underprint, overprint, selective, spot, filling and pixel underprint

### Spot Color Replacement

- Receive information on how accurately color will be printed via Delta E values before you begin printing

### Available Options

- Multi-Color Profiler Module
- ProofGATE Module
- DeviceLink Profiler
- Fujifilm Taskero Colorpath Verified
