diagnostic software**IMPROVE YOUR PRINT PERFORMANCE**

*suite of tools provides printers with  
ultimate quality control.*

Customers demand absolute color perfection and, to remain competitive, printers must meet this demand. That's why we've developed Taskero Universe. Designed to provide critical, up-to-date information on every part of the print production process, Taskero Universe monitors hardware from the prepress stage through to the pressroom and offers a method for monitoring, controlling, and maintaining consistent quality throughout all phases of the printing plant. The diagnostic software alerts you to what is happening now, what happened previously, and what will happen next. From red light/green light functionality to trend analysis, Taskero Universe brings visibility and control to your business.

Taskero Universe consists of three components – ColorPath Verified, Server Performance Management and Hardware Performance Management – and delivers real time information about the status of your print performance and alerts you to scheduled routine maintenance. Additionally, Fujifilm's Print Performance Team is able to continuously monitor your devices over the Internet and alert you the moment something appears to be abnormal. Taskero Universe will also monitor your prepress network for efficiency and report its status.

With Taskero Universe, you gain real time reports on your prepress equipment activity, proofing and plate quality, and color control throughout your entire plant.

**Taskero Universe Features:**

- **Prevent proof-press color mismatch:** Taskero Universe includes verification of every proof and every plate, alerting you to a potential mismatch as early as possible and allowing you to remedy the problem before wasting press time.
- **Ensure true/correct color on reruns:** Taskero Universe records each job's history, allowing you to reference the original job and eliminating the guesswork over the density and dot gain targets.
- **Eliminate variables associated with paper selection:** Taskero Universe tracks the print performance characteristics of your pressroom, including those of different paper types, providing you with valuable information when planning future jobs.
- **Notify tech support immediately:** Taskero Universe captures the signals sent by your hard drive when a failure occurs and will automatically and immediately notify the appropriate personnel.

## COLORPATH VERIFIED

Taskero Universe's ColorPath Verified component enables users to communicate, control and confirm color across a number of devices, including monitors, inkjet and digital halftone proofers, CTP devices and printing presses. Users are asked to verify color on every output by reading and validating a printed calibration strip, providing immediate feedback on the status of the device and its conformance with an established target.

Taskero Universe alerts users of errors and future versions of the software will automatically connect them via the Internet to a "smart" database for troubleshooting and support. Users may also seek assistance in a live chat window, manned by Fujifilm color technicians, or initiate an on-site service call.

ColorPath Verified also securely maintains all records and tracks data, providing important benchmarks and identifying trends that can affect color, allowing clients real time information and reports.

## SERVER AND HARDWARE PERFORMANCE MANAGEMENT

Taskero Universe also features a Server Performance Management module that ensures each customer's server is performing properly and running efficiently. Fujifilm has partnered with industry-leading manufacturers to create a proactive solution aimed at optimizing server performance.

In addition, Taskero Universe monitors both your hardware and your environment and will give users early notification of possible plating problems, enabling them to take action before the problem unexpectedly stops production. The goal is to streamline the production process from the server room all the way to the pressroom.

## SPECIFICATIONS:

### TASKERO UNIVERSE

#### How Taskero Universe Can Improve Your Print Performance Verify Production Quality

- Monitors
- Inkjet proofers
- Dot proofers
- Platesetters
- Presses

#### Remote Diagnosis and Repair Tools

- Remote color guru
- Immediate notification of errors
- Online chat support
- Remote control of hardware and software

#### Remote Server Monitoring Tools

- Early warning of hardware failures
- Performance alerts
- Online support

#### Production Analysis Tools

- Trend and compare output quality for multiple devices
- View data relevant to each job

#### Implementation of Standards Based Process Control

- GRACoL 7
- SWOP
- JDF
- ISO

#### Web-based Connectivity

- View status of job or device from anywhere
